## Dear Colleague,

We are pleased to invite you to the Janssen-sponsored satellite symposium being held during the 5th Educational Conference for Haematology Nurses and Healthcare Allied Professionals Group.

Considerable advances have been made in the management of patients with multiple myeloma (MM) during the last 10 years. An increasing number of effective therapies and the use of combinations resulting in deeper responses have led to improved patient outcomes at all stages of MM. The role of nurses is of high importance in the way these treatments are administered and in the way that patients are managed throughout the course of their disease. We will explore the practical role and considerations for nurses when managing patients with MM.

We will also look to the future and explore the potential for new agents to further improve patient management. In the evolving era of immunotherapeutic approaches for MM, our expert faculty will provide their clinical insights on how recent data can be applied to current clinical practice across all stages of the disease. We will also discuss the implications for the nursing team and their involvement in the management of patients undergoing treatment with chimeric antigen receptor T-cell therapies and bispecific antibodies.

On behalf of the faculty, we thank you for reserving time for this symposium and hope you will enjoy what promises to be a stimulating and educational program.

Yours sincerely

Sarah Henshaw

Charlotte Pawlyn

### SCIENTIFIC COMMITTEE

## Program

### Duration

### Topic

### Speaker

5 mins

**Introduction**

S Henshaw

20 mins

**The role of the nurse specialist in caring for patients with MM in 2022**

S Henshaw

25 mins

**Advances in MM therapy: a hematologist's perspective**

C Pawlyn

20 mins

**Immunotherapy: the patient treatment journey and the role of nurses**

P Blázquez Benito

20 mins

**Panel discussion**
